Human Subjects Research

Research involving a living individual about whom data or biospecimens are obtained, used, studied, or analyzed through interaction/intervention.

Where identifiable, private information is used, studied, analyzed, or generated (PHI). This includes human samples or data from an existing biobank.

Any experiment that involves a test article and one or more human subjects and that either is subject to requirements for prior or eventual submission to the FDA as part of an application for a research or marketing permit.
