

Template language for the “Micro/Infectious Agent Additional Detail” eSirius section, specific to *Escherichia coli* (*E. coli*) work:

1. “Laboratory strains of *E. coli* (e.g., K-12, B, C, W, and derivatives) have been engineered to be non-pathogenic and so are highly unlikely to cause infection following accidental exposure of a healthy individual. Symptoms associated with infection by pathogenic *E. coli* include abdominal cramping, diarrhea, fatigue, nausea, vomiting, and mild fever.”
2. Approximately 3-4 days.
