

ENVIRONMENTAL HEALTH AND SAFETY | HAZARDOUS MATERIALS

Shipping Chemicals

Only personnel who have been properly trained to Department of Transportation (DOT) standards may engage in the shipment of chemicals from the University. Environmental Health and Safety (EHS) has staff members who are trained as shippers under DOT regulations and are available to assist researchers with their shipping needs.

Contact EHS at 303-724-0345 to receive assistance from a properly DOT trained member in the shipment of chemicals to another university.

Prior to contacting EHS collect the following information that will be required to properly package the chemicals that need to be shipped:

- Chemical names along with the corresponding safety data sheet.
- Size and type of container being used to ship the chemicals.
- Destination address.
- If shipping via FedEx, the FedEx accounts for both the shipping and the receiving party.

EHS will use the information provided to select the proper shipping method and prepare the corresponding paperwork to ensure the safe packaging, transportation, and delivery of the chemicals.
